Abstract: ~~Purpose: To prevent the corrosion of a heat insulating material of polyurethane foam from termites by mixing pyresteroid compound and toluene in the polyurethane foam.~~
Constitution: For example, pyresteroid compound and toluene are mixed with system consisting of polyore component and isocyanate component in advance. If necessary, 3-iodo-2-propyl-butyl carbamide as an antiseptic/mildew proofing agent can be also added. At that time, as pyresteroid compound, permethrin or decamethrin, etc., are used. After that, such a mixture consisting of polyore component, etc., is foamed, and a heat insulating material of polyurethane foam is obtained. When the polyore component and isocyanate component are foamed, pyesteroid compound, etc., can be mixed with them. Accordingly, termites are exterminated by pyresteroid compound, and rate of insecticide can be promoted.
